2018 SPECIAL MEETING HANDLER WITHHOLDING DISCUSSION HILTON BOSTON LOGAN AIRPORT, BOSTON, MA JANUARY 17, 2018

WEDNESDAY, JANUARY 17, 2018

The CMC Special Meeting was called to order by Chairman Rezendes on Wednesday, January 17, 2018 at 8:59 a.m. at the Hilton Boston Logan Airport, Boston, MA. The Chair requested Ms. Judy Mears, CMC's Executive and Financial Assistant to call the roll, after which the Chairman seated Dawn Gates-Allen for George Bussmann for District 4 Independent member, Kevin Hatton for Frank Glenn, District 4 Major Co Op member, and Joe Darlington for Alex Ells for the Member-At-Large Major Co Op member. The Chair also introduced and welcomed Thomas O'Guinn to his first CMC meeting and announced he is the voting public member. Ms. Mears stated a quorum was present.

Chair Rezendes requested Doris Jamieson, the CMC's USDA Marketing Specialist, to read the Anti-Trust Guidelines statement and reminded the Committee and audience that the Handler Withhold Volume Regulation was published on January 2, 2018 in the Federal Register so we are currently under the comment period and ex-parte guidelines are in effect. USDA representatives are present to hear industry concerns but will not be permitted to answer questions, participate in discussions or comment on the rule. USDA personnel will be taking notes and the CMC's Executive Director and her staff will be taking minutes that will be entered into the rulemaking record. This does not replace comments which individuals wishing to do so should submit to http://www.regulations.gov as outlined in the rule.

Chairman Rezendes introduced and welcomed USDA's Acting Deputy Administrator Andrew Hatch and Jen Varela and Doris Jamieson, Marketing Specialists to today's meeting. The Chairman began the meeting with a review of the Rules of Order and changes to the agenda and requested that when an audience member speaks to please stand and state their name, if they are a handler or grower, and the company they are affiliated with prior to making their statement.

OVERVIEW AND OUTLINE OF THE PROPOSED RULE

A review was given by Jill Amundson on the 2017 proposed rule, and then followed with a list of specifics of what we as a committee and industry can do during this meeting. Ms. Amundson summarized the original CMC 2017 Handler Withholding volume regulation recommendation from the 2017 summer meeting in Long Beach, WA. She also stated that all comments regarding the proposed rule must be received by February 1, 2018 and will be made public and will be considered by USDA before making their final determination on this volume regulation.

34 35

Proposed Rule - SUMMARY

- Dates: September 1, 2017 to August 31, 2018
- 85% Free
- 15% Restricted
 - $-\,50\%$ of restriction can be disposed in processed form
- Exemptions
 - Handlers who handle less than 125,000 bbls
 - Handlers with no carryover inventory
 - Organically grown cranberries

Proposed Rule - SPECIFICS

- · Proportion of cranberries that may be handled 85%
 - Handlers subject to this rule may process, sell, put in inventory, or do what they will with 85% of the useable crop they received.
- · Proportion of cranberries that must restricted 15%
 - Handlers subject to this rule must restrict 15% of the useable crop they received.

Proposed Rule - SUMMARY

- · Outlets for restricted fruit
- · Some formatting changes to the order
- Comments
 - Must be received by February 1, 2018
 - All comments will be made public
 - All comments will be considered before a final determination is made on this rule

Proposed Rule - SPECIFICS

- Disposal
 - As whole unprocessed fruit
 - As concentrate
 - . Up to 50% of the total disposal amount
 - · Subject to the conversion chart in the proposed rule

Proposed Rule - SPECIFICS

- - All actions are to take effect beginning September 1, 2017 and be completed by August 31, 2018.
 - There is no language extending the reach of this beyond one crop year.
 - There is no mention of extensions beyond the crop year for disposal plans.

Proposed Rule - SPECIFICS

- · Outlets for Restricted Fruit
 - Foreign countries, except Canada
 - · Fresh or Unprocessed fruit only
 - Charitable institutions
 - Any nonhuman food use
 - Research and development projects approved by the Committee
 - Domestic or Foreign markets
 - · Fresh or Processed fruit

Proposed Rule - SPECIFICS

- Exemptions
 - Handlers who handle less than 125,000 bbls
 - . Handlers of record from the 2016 crop
 - Must handle less than 125,000 bbls
 - Handlers with no carryover inventory
 - · Handlers with no inventory as of August 31, 2018
 - · Handlers with inventory under contract
 - Organically grown cranberries
 - Organically grown cranberries, no certifications mentioned in proposed rule

Possible Actions Now

- Motions
 - Rescissions
 - Now that the motion made in August has been placed in a proposed rule, it is no longer appropriate to rescind the motion.
 - Amendments
 - Now that the motion made in August has been placed in a proposed rule, it is no longer appropriate to amend the motion, but the Committee may want to make new motions to address certain items within the proposed rule.

Proposed Rule - SPECIFICS

- · Formatting changes to the order
 - Subparts to adjust for the additions and changes made with this rule
- All comments must be received by February 1, 2018
 - 30 day comment period began on January 2, 2018
- All comments will be made public
 - The name of the individual or entity along with their comment will be made public on the internet
- All comments will be read and considered by USDA before a final determination is made on this rule
 - Just because a comment is made does not mean a change will be made

Possible Actions Now

- New Motions
 - A new motion is appropriate to change items within the Committee's authority,
 - Two items within this rule that fall under this allowance are:
 - Change the percentage of free and restricted fruit, the percent restricted may be lowered, but not raised at this time.
 - Change the percentage of concentrate allowed for disposal in lieu of whole fruit.

Possible Actions Now

- Comments
 - Committee, industry and individual comments on the proposed rule
 - Clarifications
 - Confusions
 - ApplicationsDefinitions
 - It is appropriate for us to go through the proposed rule and address areas of concern.
 - A guided discussion of each section will try to group comments together to most effectively communicate any potential issues.

SPECIFICS were reported as follows:

39 40

41 42

43 44

45

46

- All actions will take effect during the crop year of 9/1/2017 through 8/31/2018
- Extensions beyond the crop year for disposal plans are not included
- Proportion of cranberries that may be handled: 85% Handlers subject to this rule may process, sell, put in inventory, or do what they will with the 85% of the useable crop they received.
- Proportion of cranberries that must be restricted: 15% Handlers subject to this rule must restrict 15% of the useable crop they received.
- All comments must be received by February 1, 2018: 30 day comment period began on January 2, 2018

- All comments will be made public and include the name of the individual or entity with their submission
- All comments will be reviewed and considered by the USDA before a final determination is made on this rule

52

- 51 DISPOSAL
 - Unprocessed whole fruit can be disposed
- In lieu of whole fruit, up to 50% of concentrate or another processed form may be disposed in barrel equivalencies and as proposed in the rule.

55

56

- **OUTLETS FOR RESTIRCTED FRUIT**
 - Foreign countries, except Canada Fresh or Unprocessed fruit only
- Charitable institutions
- Any nonhuman food use
 - Research and development projects approved by the Committee

59 60

61

62

63

64

EXEMPTIONS

- Handlers of record from the 2016 crop and handled less that 125,000 bbls
- Handlers with no inventory as of August 31, 2018, any carry-over inventory must be under contract.
- Organically grown cranberries, clarification will be needed since no certifications were mentioned in proposed rule.

65 66

70

71 72

73

- 67 Ms Amundson presented an overview comparing the Proposed Rule vs. the CMC Recommendation and was as 68 follows:
- 69 The CMC's recommendation:
 - The CMC proposed rule recommended the crop year dates of 9/1/17 8/31/18
 - Excess fruit would need to be disposed by August 31, 2018
 - 85% free percentage of fruit and 15% restricted percentage of fruit
 - 50% of disposal could be in processed form.
- The first 125,000 bbl for every handler be exempt, i.e. which would have subjected a 130,000 bbl handler to a 15% restriction on the 5,000 bbls over 125,000. This change restricts an additional 18,750 bbls on this handler in this example.
 - Certified organic fruit will be exempt from regulation

- 79 The proposed rule as published on January 2, 2018:
- There is an exemption for handlers with no carry-over inventory. This wasn't asked for by the Committee, but given to us by USDA

- Organic Exemption was recommended by the Committee, it is now worded differently. The Committee specifically asked for a USDA certified organic exemption, the rule came out as an organic exemption, not a USDA certified organic exemption.
 - Outlets for restricted fruit: Exactly asked for in the Committee motion.
 - Formatting changes include new sections to the order
 - o §929.108 Outlets for restricted cranberries
 - o §929.252 Free and restricted percentages for the 2017-18 crop year
 - 30-Day comment period; comments will be made public and considered prior to the final rule being published

- MOTIONS
 - Rescissions: Now that the motion made in August has been placed in a proposed rule, it is no longer appropriate to rescind the motion.
- AMENDMENTS
 - Now that the motion made in August has been place in a proposed rule, it is no longer appropriate to amend the motion; however the Committee may want to make new motions to address certain items within the proposed rule.
- NEW MOTIONS A new motion is appropriate to change items within the Committee's authority. Two items within this rule that fall under this allowance are:
 - Make a motion to change the percentage of free and restricted fruit, the percent restricted may be lowered, but not raised at this time.
 - O Change the percentage of concentrate allowed for disposal in lieu of whole fruit.

COMMENTS -

- Committee, industry and individual are strongly encouraged to comment on the proposed rule. These comments may include the need for clarification to address any confusion with the proposed rule, the application of the handler withholding program and definitions
- It is appropriate for us to go through the proposed rule and address areas of concern.
- A guided discussion of each section will try to keep group comments together to most effectively
 communicate any potential issues.
 - The Committee will not make any recommendations; it will just submit the minutes including the comments received during this meeting.

Parker Mauck reviewed the 2017 August marketing policy document. Following Mr. Mauck's presentation, Peter
Wyman, a member of Ocean Spray's management team, began his presentation of their estimated crop figures for

122 201*7*.

Mr. Wyman provided Ocean Spray Cranberries (OS) estimates of the crop for 2017. Mr. Wyman stated that from the 2017 marketing policy, the Committee's estimates were 9.14M bbls. OS is now estimating the crop at 8.26M bbls, down approximately 900k bbls, or 10% versus the estimate. Mr. Wyman noted Mother Nature already removed the 15% of excess fruit, as originally intended, from inventory for 2017. Mr. Wyman also noted that the only area where cranberry production didn't decrease in 2017 was from Oregon. Wisconsin, Massachusetts, New Jersey and Washington were all down in production. Reason's for the decrease in production included drought, deer damage,

smaller and poor color of fruit and decreased inputs by growers due to low returns.

143

Mr. Mauck reviewed slides that compared the original proposal based on the estimated crop from the Aug 2017 CMC meeting and the estimated actual crop changes in production. Also included was an option to lower the restricted percentage from the original 15% to 5% withholding. The focus of this exercise is to see the cost impact to growers for the disposal of fruit for the handler withholding.

154

155

The original recommendation from August shows a per barrel cost to growers for disposal of 15% at approximately \$2.16/bbl to the handlers that are regulated which will get passed on to the growers. In comparison, with the 125,000 barrel exemption modified, the cost still remains high to growers at \$2.52 bbls. The final example in the chart shows that a decrease in the restricted percentage from 15% to 5%, handlers will be restricting approximately 320k bbls from inventory and then adding the Mother Nature affect of 881k bbls, still removes 1.2M bbls out of the market place. Because Mother Nature did the heavy lifting by removing bbls out of the market place naturally, the cost of disposal that is passed on to growers is significantly reduced to \$0.84 bbls, the amount of fruit to regulate has been reduced. Going through this exercise gives us a clear picture of which of these examples makes the most sense. The gift Mother Nature gave the industry helps us achieve a number that actually surpasses the Committee's original plan to remove fruit from the market place through natural reduction, while giving the cranberry industry the ability to do that at a bargain price compared to the other plans.

156 157 158

159

Chairman Rezendes noted these are just to show the range that each of the programs fall into. As shown, the first three are in the same range, but in the last program by going from 15% to 5% you'd save a third of your cost.

Mr. Mauck continued with how the proposed changes may impact the growers throughout the industry based on the size of the handlers they ship to. Mr. Mauck reviewed the

differences in impact of the proposed rule versus the original

rule. What was found was the impact to growers differs

dramatically.

Chairman Rezendes stated we are now in late January and we should expect that we won't get back a final rule until at the earliest March. By the time we get the final handler withholding rule published, we may be into late April or May by the time a company can actually process or dispose of

172 excess fruit.

EXEMPTIONS OVERVIEW

Chairman Rezendes led the discussion and explained that what was proposed and what is in the rule as it's written is that any handler that handles less than 125,000 bbls is exempt. He explained that in the original motion, we had the first 125,000 bbls for every handler exempt. In the current written proposed rule, it states it would only exempt small handlers who process less than 125,000 barrels or handlers who wouldn't have carryover inventory at the end of fiscal year (2017-18) from the restriction, and that the 125,000 barrel exemption would not apply to handlers who did not meet those conditions.

Perception of Fairness:

Presented by Parker Mauck, Decas Cranberry

Mr. Mauck presented how the change in the 125.000 bbl exemption will impact the growers and members of the industry he has spoken with since the rule was published January 2, 2018. The original proposal was perceived as fair, because whether you liked it or not, all handlers across the board received the same exemption. As it's currently written, it discriminates based on the size of the handler. It's critical that we relay to the USDA the potential for different growers to be impacted differently based on the rule as it's written. The program is supposed to benefit growers, however some growers will be penalized based on the type of handler they sell to while others are not affected.

- Mid size handlers will see their impact increase dramatically, in some cases doubled.
- While the very largest handler will experience a subtle impact, since the 125,000 bbl increase is a small percentage of their overall handle.
- Cost Increase: All costs filter down and affect grower returns.
 - Removing the 125,000 bbl exemption dramatically increases the total disposal costs for mid-sized handlers
 - Further reducing the handle for mid-sized handlers spreads fixed costs over less fruit, increasing the cost per bbl
 - With less sales revenue, the margin dollars shrink, further reducing a handlers ability to raise grower returns
 - The benefit of a reduced crop and subsequent increases in grower returns will be eroded by increased disposal costs for some growers. Growers do not equitably share the costs or benefits.
 - The impact on a grower has nothing to do with whether or not the grower has contributed to the surplus.
 - Perception of Fairness: No Inventory
 - Measuring inventory as of August 31, 2018 provides an exemption based on the handlers business model, not "excess" inventory or contribution to surplus. The problem is not inventory; it is "Excess inventory".
 - It discriminates based on the business model of the handler. The program is supposed to benefit growers, but some growers are penalized based on the type of handler they sell, to while others are not affected.
 - Verification will be problematic: definitions and clarification are necessary
 - What is inventory? All years, all forms, all "sources"
 - o Allowances exist for sales and contracted inventory. Who can the "customer" be?
 - O How does the CMC verify?
 - Timing: does not relate to the calendar of fruit utilization. Handlers that process fruit need supply until the new crop is frozen.
 - o If a handler does not have everything contracted by 8/31/18 and they lose exemption, how do they go back and restrict fruit they don't have any more?
 - o If the date gets moved to 1/31/19 to accommodate SDC processors, if they don't make it is the disposal date in August?
 - O Will this create "fire sales" prior to the August cutoff? This is counterproductive.

PROPOSED RULE COMMENTS BY CATEGORY

- 229 **CARRYOVER:** Chairman Rezendes read aloud as written in the new rule as: Any handler who does not have carryover inventory at the end of the 2018 fiscal year would be exempt.
- 231 (Q) Handlers with no carryover inventory, does that also apply only to handlers of record from the 2016 crop?
- 232 (A) We need clarification and we are unable to answer.

- 233 (C) I think it was explained fairly well that the USDA felt the smaller handlers didn't contribute as much to the surplus
- as the large handlers and therefore they allowed them an opportunity to become exempt based on the 125,000
- barrel and/or the volume of carryover as of Aug 31, 2018. I think the only thing that's controversial, in my opinion,
- 236 is the cutoff date. Needing carryover is more in line with how handlers run their businesses today in the SDC market
- and in the juice market than what actually is occurring with crop usage and dates. This is not beneficial to the
- 238 midsize handlers with the way this proposed rule is currently written.
- 239 (C) We're a sweet and dried manufacturer and January 15 is our deadline to use up carryover so they need the
- 240 90 day carryover.
- 241 (C) I think December 31st is a good date because it's a reporting end date. We could modify existing forms to
- show inventory, it will show the crop that came in that year.
- 243 (C) You would have to extend the disposal date past that date for anybody that is unsuccessful at achieving no
- 244 inventory.
- 245 (C) Every year, financial, production, and sales and marketing plans are made to grow demand. I have a hard
- 246 time delineating whether it's the date of disposal or the reduction in the 125,000 bbl exemption that's more
- 247 disruptive to this. But both of them appear to be discriminatory to that middle class of handler. We're not creating
- 248 demand anymore. The bottom line is discrimination can encourage some litigation, and we all want to avoid that if
- 249 at all possible.
- 250 (C) The carryover inventory explains the verbiage as "no carryover or under contract". Under contract under
- 251 contract with who? This needs clarification: it is too vague and includes unintended opportunities to involve
- 252 middlemen, contracts, etc.
- 253 (C) Most handlers would have carryover in order to stay in business. USDA description doesn't go far enough to
- 254 prevent tracking issues so that staff could properly enforce this part of the rule. It is very concerning that a handler
- 255 could do a paper transfer and not an actual physical transfer of fruit.
- 256 (C) On page 76 of the Federal Register, first column, second paragraph talks about the fact that only handlers that
- 257 have carryover inventory that is not sold or under contract at the end of the 2017-2018 fiscal year would be subject
- to the 15% restriction. But they don't go far enough in making sure that inventory isn't just sold to somebody else who
- is going to put it in inventory. About 10-12 years ago, section 926 was permanently suspended. As written today,
- this has created a large loophole.
- 261 (C) Would the intent of the language apply to the handler that has carryover to any processor or customer? Once it
- is sold to a processor, the handler withholding would not apply.
- 263 (C) The intent is not to penalize an entity as the original entity no longer has produce if it's just given to another
- 264 processor. It's still in inventory but not regulated.
- 265 (C) That's why I see this no carryover inventory as such a problem for our industry, as it's written right now; it has
- the potential to be abused hugely.

- 268 (Q) That is the concern, have we articulated that to sufficiently Jen?
- 269 (A) Jen Varela, USDA. Yes, that is the type information and a good example to put in a comment.

270 **125,000 BBL EXEMPTION:**

- 271 (C) My handler handled approximately 200k barrel, and was prepared for 11,250 barrel reductions in crop due
- 272 to original proposal. Now with the current proposal, he would now need to dispose of 30k barrel on a 200k barrel
- 273 handle. This would affect them greatly.
- 274 (C) On the 125,000 barrel as matter of fairness, you should treat everyone the same. Don't pick winners and
- losers. I am in favor of the way it was written in the original proposal.
- 276 (C) Every year, financial, production, and sales and marketing plans are made to grow demand. I have a hard
- 277 time delineating whether it's the date or the reduction in the 125,000 barrel exemption that's more disruptive to this.
- 278 But both of them appear to be discriminatory to that middle class of handler. We're not creating demand anymore.
- The bottom line is discrimination can encourage some litigation, and we all want to avoid that if at all possible.

280 281

OUTLETS FOR RESTRICTED FRUIT:

- 282 (Q) Can you use processed fruit?
- 283 (A) Yes, everything is charitable

284

- 285 (Q) So, in other words, unprocessed or fresh would be for non-competitive foreign countries other than Canada?
- 286 (A) Yes

287

- 288 (C) The way we wrote the motion does state that, it's just a clarification is how they wrote section 929.108 that
- addresses charitable institutions, non-human use.
- 290 (C) In regards to international markets, we see SDC's in China as a big opportunity for concentrate and juice. India
- 291 is cumbersome to donate whole fruit without it being in form of SDC or concentrate. Transportation of product is a
- 292 huge issue. USDA's help would be welcomed.
- 293 (C) Some are interpreting it as whole fruit or concentrate. If you give to charity you are unable to give SDC's or
- 294 juice. The answer to this is not in the rule. We understood it when we made the rule in the original proposal to
- 295 include all forms if we wanted to convert that whole cranberry or concentrate into a usable form to give to charity.
- We'd like to add those conditions to the rule. As far as undeveloped foreign market access, we would also want the
- same indication, to include all forms.

298

- 299 (Q) If a handler gives to charity are they able to give SDC's or juice?
- 300 (A) The answer to this is not in the rule. We understood that our recommendation in the original proposal was to
- include all forms if we wanted to convert that whole cranberry or concentrate into a usable form to give to charity.
- 302 We'd like to add those conditions to the rule. As far as undeveloped foreign market access, we would also want the
- 303 same indication, to include all forms.

304 305

COMMENT PERIOD:

- 308 (Q) My family made a comment prior to the comment period, would that be part of that as well, or should I
- 309 resubmit?
- 310 (A) Yes, you should resubmit

311

307

- 312 (Q) If new motions are voted on and these comments are included in the final Federal Register posting, does the
- 313 comment period get extended so industry can submit additional comments?
- 314 (A) No, the next decision will be ruled by the Secretary and will be final.

315

- 316 (C) Doris Jamieson, USDA. Remember comments are separate from minutes. The minutes will go into the rulemaking
- 317 package. Comments will be considered prior to finalization. What has been discussed today will be useful in our
- determination; however individual comments will hold much more weight than today's discussion.

319

- 320 (Q) I am pleased the comments will be made public. Will the name and region location on comments be noted, and is
- 321 this something new?
- 322 (A) Doris Jamieson replied, no.

323 324

DATES OVERVIEW/DISPOSAL:

- 325 (C) We recommended the dates of disposal was to get product out of inventory as soon as possible during our crop
- 326 year 9/1/17 8/31/18
- 327 (C) Although the options we are talking about for disposal are 12/31/18 through 3/31/19 where handlers can
- dispose of excess fruit any time. The way the crops are being sold, anyone who has inventory has to have it before
- 329 the next crop comes in for handler to supply customers.
- 330 (C) End crop year for disposal should be 1/15/19.
- 331 (C) If the reporting deadline changes, this VR can end up having zero effect
- 332 (C) As of Aug 31 if anyone has a zero balance, you would be disrupting demand.
- 333 (C) Not in favor of a deadline. If you let the market know of a deadline, you will put a rush on purchases in the last
- 334 week of disposal. No deadline should be put in it would create "artificial time limits" and will have a negative
- impact to the grower.
- 336 (C) No carryover should be limited carryover is already figured into the industry. To have no carryover would
- disrupt the industry as a whole. There are pipeline needs.
- 338 (C) Profitability occurs when carryover is optimal at 50-60%.
- 339 (C) Carryover needs to be gone by August 1st. If you come up short and are regulated, how do you go back and
- 340 apply the 15% restriction?
- 341 (C) It's only because the USDA put the zero carryover in; that we are here.
- 342 (C) Inventory is industry wide and could address the carryover issue. This should only pertain to raw fruit. Once raw
- fruit is changed into a finished product, it should be off the table.

- 344 (C) How you store fruit is messing up the industry.
- 345 (C) Ending inventory is what it is regardless of how it is stored.
- 346 (C) I believe when the federal marketing rules were established and maintained over the years, they never intended
- 347 to regulate processed forms of fruit, only fresh picked, raw fruit off the vine, and prior to processing.
- 348 (C) To regulate cranberries beyond the grower delivering them to his handler at harvest, under this handler
- 349 withhold, I believe violates the affect of the cranberry federal marketing order. I believe it is intended to regulate
- 350 the fruit at the time of harvest, when it is transferred to the handler prior to processing, not after.
- 351 (C) I think the changes that we made when we proposed the rule; does make it after.
- 352 (C) We need a definition of sales; and what is the proof of that sale? What is the definition of a contract? We
- need some guidance and some specifics. If we don't get that, it will leave a lot of room for interpretation.
- 354 (C) The largest handler is 100% owned by its growers. We are farmer owned. Changing the dates would end up
- 355 affecting only Ocean Spray.

MISCELLANEOUS COMMENTS:

- (C) I'm a small grower who in the regulation and USDA process is defined as a producer with less than \$750,000 in annual sales who have mid-sized handlers who are, under the proposed rule, will have twice the burden of people who are under 125,000 bbls, or someone that can prove that they have 100% of their inventory sold. One of our problems we see is if someone is fortunate enough to have a third party contract, does that mean their inventory is sold? If it goes to another handler or somebody that has inventoried, that should not be acceptable. That shouldn't make their fruit, compared to my fruit, exempt. I shouldn't be paying the freight because their handler decides to sell to another handler their entire fruit with a contract, that that fruit becomes exempt. The cost of disposal for growers in Massachusetts, I feel, are more than what some of the regulations in Wisconsin are, so it's going to add a lot more burden to the growers in Massachusetts. I think that the grower with a mid-size handler that will not be exempt from the 125,000 barrel is going to absorb such a large disproportionate share of the cost of disposing of the fruit from that handler.
- 370 (Q) The Alternate Public Member asked what the current return to grower price was and if the average price is \$23
- and some change by the USDA economist. If this is a handler exemption, the cost to a grower it could be 18-25%.
- 372 Could the growers afford to take that hit?
- 373 (A) NO
- 375 (Q) When the USDA wrote the rules, they did not put in a handler of record as of 2016.
- 376 (A) Doris Jamieson, CMC's USDA Marketing Specialist. That is just a guideline. By having it in the first guideline, it is 377 supported in the second.
- (C) I would like to comment on Jill's point of handler of record of 2016 crop year as a cranberry grower. I believe
- 380 that it is some sort of a biased tone against new handlers coming into the market place in regards to a potential

- 381 barrier of entry, although certainly not a complete barrier, but a very large hurdle for any handler that would
- 382 become a handler of record for crop year 2017 versus 2016.
- 383 (C) What this discussion is transpired around is a change in what the Committee actually voted on. For the USDA to
- 384 come in and add their spin it just shows how topsy turvy it can become. My comment or recommendation would be
- 385 that, if the USDA were to go along with the intention of the rule of the Committee, it would be more efficient and
- 386 economically beneficial to the cranberry industry. After having the Committee comes to an agreement under all the
- 387 rules, under all the regulations, under all the scrutiny, and to have it be changed yet again is discouraging to the
- 388 grower community.
- 389 (C) I want the USDA to realize, at the last meeting in August, as a group, we worked hard to come to a compromise
- and agreed with each other that this is a new start to correct oversupply. I feel very defeated after what the
- 391 Committee went through and to have the USDA step in and change this. The new proposal isn't anything like what
- 392 we agreed upon. Going back to the original proposal seems to make so much more sense. It would be doing what
- 393 we wanted to do, in an efficient and cost efficient way, and the changes are just not at all what, represents myself
- as a grower that sells to a mid-size handler. This will hurt me even more; I just cannot be hurt any more.
- 395 (C) A reasonable compromise was met but with inequalities. But those inequalities have been exacerbated by the
- 396 USDA's intervention. USDA's actions are making it worse. In my opinion, increasing demand is the solution; rather
- 397 than restriction.
- 398 (C) I request the USDA use the authority they have as they did in 2014 to eliminate the HW 2017 crop and let's
- 399 address the producer allotment for 2018.
- 400 (C) The cost of inspections will be passed on to the growers. In addition, the cost of this meeting will be included to
- 401 the cost of handling this regulation. At this time growers are paralyzed waiting to make any decisions for the 2018
- 402 crop.
- 403 (C) The season starts in March and to plan for 2018, growers need decisions. A lot of guess work is trying to be
- done. With a lot of unknowns, this will have a huge effect on the local economy as a whole.
- 405 (C) When the Committee met in Washington, no one wanted volume regulation. But our motion in August shows that
- 406 all growers want to make sure the USDA knows that we all want to make the family farm viable again. We are all
- 407 concerned about our industry and we are united behind the strength of our family farms.
- 408 (C) Before we conclude, I would like to ask the USDA to please hurry on the 2018 producer allotment decision.
- 409 (C) We need to complete this process as soon as possible.
- 410 (C) I'll second Parker's comments. I've spoken with many growers in my region and they are already implementing
- 411 plans. Therefore they are counting on the producer allotment and would like an answer as soon as possible.
- 412 (C) We need to know ahead of time to make plans.
- 413 (C) Growers believe producer allotment is the way to get this oversupply under control and is the easiest way to get
- 414 fruit disposed of. I would like to thank the USDA for attending today.
- 415 (C) I would like to reiterate the importance of the producer allotment decision as soon as possible.
- 416 (C) I would like to impress upon USDA to attend the CMC's February meeting and I feel it would be beneficial to
- 417 them in understanding what the industries needs are.

- 418 Michelle Hogan, CMC Executive Director. We are not ex-parte on the 2018 because it hasn't been published yet;
- 419 could you give us an update on where we are and if you are waiting for any additional materials? Doris Jamieson,
- 420 USDA responded: It is in the drafting process, yes. We have heard your comments and requests multiple times, that
- 421 is expressed and duly noted. We are working on it, yes.

ORGANIC REVIEW:

- 424 (C) We don't see anything in the proposal as written where it specifies USDA certified as it was requested in the
- 425 original proposal.
- 426 (A) Doris Jamieson, USDA Marketing Specialist. The National organic program definition for organic is assumed and
- 427 would be in effect.
- 428 (Q) Is that an assumed USDA policy?
- 429 (A) Doris Jamieson, USDA Marketing Specialist. Yes.

430 431

CHANGES IN FORMATTING/PROPOSED RULE:

- 432 (C) As a point of clarification for us; in the proposed rule submitted, there's a significant amount in the beginning as
- 433 the justification for the rule as written. At the very end there are three new sections that will be added into the
- 434 section 929. There is a whole bunch of stuff that is outlined and discussed and mentioned in the beginning that's not
- 435 specifically mentioned in the three pieces at the end. So when we look at our order normally, for other things we
- are forced to go by the wording specifically that's in the order of those sections of the 929. So how do we interpret
- 437 things that may not be explicit in the 929 sections in the proposal?
- 438 (A) Jen Varela, USDA Marketing Specialist: This is great topic for comments. The USDA does use the entire body of
- 439 the rule to help put language into context. However if you do have a concern that this would make it difficult for
- your industry to comply, or for your staff to carry out, then please comment on that.
- 441 50% CONCENTRATE LEVEL REVIEW:
- 442 (C) I will submit my comment to increase the percentage of disposal of concentrate personally to the USDA.
- 443 (C) To touch on the concentrate percentage, we agreed as a group on the percentage, but why are we limiting
- 444 handlers to how they dispose of their fruit. I still support the handler to dispose of whatever product is most
- beneficial to that handler company.
- 446 (C) Having more flexibility may make it more cost effective as well. It could reduce cost of you could dump
- 447 concentrate totally.

448

- 449 Following a lengthy discussing regarding the proposed rule and recording many of the comments received, Chair
- 450 Rezendes stated that within our Order we have the possibility to change restricted fruit to a lesser amount. We also
- have the capability of changing the concentrate option from 50% to both a lesser or greater amount.

- 453 A member of the Committee read aloud from the federal register proposed rules page 76, "One alternative
- 454 considered was not to impose volume regulation restrictions during the 2017-18 crop year. However, Committee

members believed that inventory levels were such that some form of volume control was necessary to help stabilize marketing conditions." He continued by stating that dipping into our over supply has been taken care of by Mother Nature and that we may want to adjust the restricted percentage figures.

Chair Rezendes informed the Committee that he would entertain a motion to adjust the restricted amount of 15% handler withhold. He clearly stated that this will be a recommendation and USDA will have the final decision on the adjusted percentage, if any.

A member of the audience stated our goal at the beginning was to get 15% out of the market, when we take the exemption into account; the net effect is only about 10%. Based on the figures presented earlier, Mother Nature took 12% out, so in theory the first proposal is void.

Mr. Mauck motioned to reduce the handler withhold percentage from 15% to 5%. Seconded by, Ms. Mollor.

- It was asked if the numbers projected today accurately reflect actuals. Although the Q1 figures will not be reported until after January 20th, Michelle Hogan, CMC Executive Director, responded she felt very comfortable with the numbers presented and had spoken with several handlers and growers in each of the districts and all agreed they were in line with 8.2 for the 2017 crop. Chairman Rezendes, Mr. Wyman, Mr. Mauck and others agreed there is a high level of confidence with this figure.
- Ms. Varela, USDA Marketing Specialist asked for clarification about comments made earlier about the cost being disproportionate at the current levels. Could anybody speak to how this change is particularly going the benefit those mid-size handlers that you were concerned about at 15%? Several explained the 15% to 5% restriction would dramatically decrease the cost that gets passed down and absorbed by the growers from \$2.52 to \$0.84. This applies to all handlers across the board not just mid-size handlers.

 After hearing no further comments, Chairman Rezendes asked the Executive & Financial Assistant to take a roll call vote. The motion passes to reduce the handler withhold percentage from 15% to 5% with a vote of 12 for, 1 against, and 1 abstained.
